

Course: Introduction to Programming Using Python

Module 1. Introduction to Python. Part 3

Task 1

The user types in a two-digit number. For example, 26. Display the value of the first and second digit on different lines. In our case, it will be as follows:

```
2
6
```

Task 2

The user types in a three-digit number. For instance, 891. Print the value of the first, second, and third digit each on a new line. Also, print the sum of these numbers on a new line. In our case, it will be as follows:

```
8
9
1
18
```

Task 3

The user types in two digits. Create a number containing these digits. If the typed in digits are 9 and 7, the created number will be 97.

Task 4

The user types in Celsius temperature. Convert it to Fahrenheit and display the result on the screen.
