

Course: Introduction to Programming Using Python

Module 3. String. Lists. Part 1

Task 1

The user types in a string. Rotate the strings and display the result.

Task 2

The user types in a string. Count the number of letters and digits in the string. Print both results.

Task 3

The user types in a string and a symbol to be searched for. Count how many times this symbol appears in the string. Print the result.

Task 4

The user types in a string and a search word. Count how many times this word appears in the string. Print the result.

Task 5

The user types in a string, a search word, and a replacement word. Replace one word with another one in the string. Print the resulting string.
