

Course: Introduction to Programming Using Python

Module 13. MVC. Part 1

Task 1

Create a class Article. Store the following data:

- title;
- author;
- number of characters;
- publisher or website where the article was first published;
- brief summary.

Create necessary methods for this class. Implement the MVC pattern for the Article class and code to use a model, controller, and view.

Task 2

Create a class Movie. Store the following data:

- title;
- genre;
- director;
- year of release;
- duration;
- studio;
- cast:
 - full name;
 - role.

Implement the MVC pattern for the Movie class and code to use a model, controller, and view.
