Course: Introduction to Programming Using Python

Module 7. Files. Part 2

Task 1

You have a text file. Create a new file and remove all bad words from it. The list of bad words is in another file.

Task 2

Write a Russian-English transliteration program. Data for transliteration are taken from a file and written to another file. The direction is chosen by the user through a menu.

Task 3

The user enters file names until he or she enters the word "quit." After the input completes, the program must combine the contents of all files listed by the user into one.

Task 4

The user enters file names until he or she enters the word "quit." After the input completes, the program must write characters present in all listed files to the final file (each file must contain characters).
